Wild potato information and growing instructions
Solanum acaule information and growing instructions
We classify true potato seeds as breeding seed; germination is not guaranteed
This product may produce plants with toxic levels of potato glycoalkaloids

Solanum acaule is a wild potato that spans much of the higher elevations of the Andes from Peru to Argentina. It is probably the most frost resistant of the wild potatoes. Tubers are small, reaching about two inches at the most and usually much less. It is possible to select varieties that are palatable, but many plants grown from seed will produce tubers that are bitter and unsafe to eat. This is a tetraploid but 2EBN species that can be crossed directly to domesticated diploid potatoes, producing triploids. For more information, click on the information and growing instructions link above.

Bulk, 1 gram packets contain approximately 1000 seeds.

Price: \$6.50 - \$35.00

Categories: Seeds in Stock, Wild Potatoes
