[Wild potato information and growing instructions](#)

[Solanum agrimoniifolium information and growing instructions](#)

We classify true potato seeds as breeding seed; germination is not guaranteed

This product may produce plants with toxic levels of potato glycoalkaloids

*Solanum agrimoniifolium* is a tetraploid wild potato, primarily from Guatemala. Plants can grow as much as six feet tall, but usually much less in my experience. Relatively little is known about this species and its potential for potato breeding appears to be mostly unexplored. This species is tetraploid but 2EBN, so it will cross directly with domesticated diploids, producing triploid progeny. For more information, click on the information and growing instructions link above.

**Price:** \$6.50 - \$7.50

**Categories:** Seeds in Stock, Wild Potatoes

**Additional Information:**

- Dimensions: N/A
- Weight: N/A
