[Wild potato information and growing instructions](#)

[Solanum vernei information and growing instructions](#)

We classify true potato seeds as breeding seed; germination is not guaranteed

This product may produce plants with toxic levels of potato glycoalkaloids

Solanum vernei is a diploid wild potato from Argentina. Plants are reported to reach four feet in height, but mine have typically been less than half that. This species carries resistance to late blight and it can be crossed directly with diploid domesticated potatoes. The tubers are extremely bitter and unsafe to eat. For more information, click on the information and growing instructions link above.

Price: \$6.50 - \$7.50
